

The most powerful industrial robot in its class – HORST1000 G2

✓ 6-year warranty on the drives
Long-lasting motors and gearboxes

✓ Robust design
Rugged and reliable

✓ No expert knowledge needed
Graphic and AI-supported

✓ Fast and easy integration
Seamless and without PLC

Industrial robot HORST1000 G2

Cost-effective automation with unique robot hardware

- Low initial and operating costs with 6-year warranty on motors and gearing
- Proven reliability thanks to the use of over 1,000 robots in challenging applications
- Robust design with optimized workspace developed for harsh conditions in metal processing

Low initial and operating costs thanks to unique gear technology - you save in the short and long term

Software for setup, programming & operation

User-friendly software for seamless integration and safe operation

- Immediately ready for production thanks to quick initial setup of all components with minimal effort
- Efficient changeover enables operators to easily integrate new components into production – even without prior knowledge
- Application-oriented user interface ensures short cycle times and reduces operating errors

Efficient automation thanks to the integrated all-in-one-Software with extensive automation functions – no PLC required

Automation package with industrial robot, controller, operating panel and software

Your key to efficient automation

1. **Industrial robot HORST1000 G2** with 1141 mm reach and 16 kg payload capacity perfectly suited for harsh industrial environments
2. **Secure and flexible controller** for complete and certified automation solutions with extensive interfaces and PLC functions
3. **Ergonomic panel** with 13.3" touchscreen (2560 x 1600 – 2.5 K) and two USB ports for mouse and keyboard
4. **Robotic automation software horstOS** for easy operation, programming and management of the entire automation system
